

Figure 1 displays four heatmaps showing the spatial distribution of the four most abundant taxa (Bifidobacterium, Lactobacillus, Streptococcus, and Faecalibacterium) across four body sites (Nasal, Oral, Vaginal, and Fecal). The heatmaps are arranged in a 4x4 grid. Each heatmap has a color scale from 0 (blue) to 1 (red). The taxa are labeled on the y-axis, and the body sites are labeled on the x-axis. The heatmaps show varying patterns of abundance across the different sites and taxa.
