

The image displays a large-scale genomic heatmap, likely representing gene expression data across a population or across different conditions. The data is organized into a grid of small, colored blocks, where the color intensity indicates the magnitude of the values. The blocks are arranged in a way that suggests hierarchical clustering, with some blocks being larger than others, indicating different levels of data aggregation or resolution. The top-left corner contains a large, dense block of data, while the bottom-right corner features a smaller, more structured block with distinct rows and columns. The heatmap is presented on a white background with a thin black border.
