

The figure displays a 10x10 grid of 100 small heatmaps. Each heatmap represents a spatial distribution of values, with colors ranging from dark blue (low values) to yellow (high values). The patterns vary across the grid, showing different spatial configurations of high and low values. The heatmaps are arranged in a regular grid, with each cell containing a single heatmap. The overall pattern of the grid suggests a systematic variation in the spatial distributions across the different cells.
